01 EXECUTIVE SUMMARY

ANALYST SYNTHESIS

Oregon's public legislative data service carries a yes-or-no field, *Vetoed*, on every bill. From 2007 until last week it was false on 26 of the 27 measures governors vetoed, and only one bill in the service was marked as vetoed. We reported the gap on 28 September. By the next day the field was true on all 27, and the Legislature has since confirmed both the numbers and the correction.

- § On 27 September the *Vetoed* field disagreed with the bills' own action histories on 26 of 27 vetoed measures, across 9 of the 10 sessions that had vetoes, including all seven vetoes of 2025.
- § The field was corrected on all 27 by 29 September, 03:28 UTC, and still matched on 6 October.
- § The Legislature's reply reproduced the numbers and confirmed the update. It does not say the update was made because of the report.

02 SIGNALS

GATED · RANKED

SIG-001 Oregon's veto field contradicted the bills' own records on 26 of 27 vetoes

CORROBORATED

On 27 September, an automated check compared each measure's *Vetoed* field with its action history across every session in the Legislature's data service. Twenty-seven measures from 2007 to 2026 record "Governor vetoed." Twenty-six read *Vetoed* = *false*. Twenty-three of those are vetoes that stood. Three (SB 545, SB 897 and SB 5520, all 2009) became law by override, so *false* was defensible for them. Only SB 215 (2013) was marked *true*.

ASSESSMENT	HIGH CONFIDENCE
------------	-----------------

SIG-002 The field was corrected on all 27 within about a day of the report

CONFIRMED

The finding went to the Legislature's data help desk on 28 September, with a one-line query anyone could run. At 03:28 UTC on 29 September, the same query returned *Vetoed* = *true* on all 27 measures, including the three overrides. Across the whole service, *Vetoed* = *true* now returns exactly those 27. It still did on 6 October at 08:16 UTC.

ASSESSMENT	HIGH CONFIDENCE
------------	-----------------

SIG-003 The Legislature confirmed the numbers and the fix, but not the cause

CONFIRMED

On 30 September the Legislative Help Desk replied, forwarding its development team's response. The team reproduced the 27 measures, the three overrides and the 24 vetoes that stood, and wrote: "The data has now been updated to ensure that all measures with a gubernatorial veto are accurately reflected." The same message first describes the old values as correct, then announces the update. It does not say whether the update was made in response to the report.

SRC · Reply from Jack Martinis, Oregon Legislative Help Desk, forwarding a response from development-team member Nagaraj · 30 SEP 2026 · held by Notitia Civica

ASSESSMENT	HIGH CONFIDENCE · CAUSE UNATTRIBUTED
------------	--------------------------------------

SIG-001 and SIG-003 together establish, with high confidence, that a structured field in Oregon's official legislative data disagreed with the Legislature's own history on nearly every veto since 2007. Anyone who asked the service which bills the governor vetoed got one bill back, not 24. The history rows were right the whole time. The field built to summarize them was not.

The baseline matters for scale. The major legislative-data vendors read veto status from the action history, so their Oregon data was already correct. The error reached people who trusted the field directly: small newsrooms, researchers and anyone building on the raw service. Comparable checks of Washington (2021–2026) and California (2025–26) found no equivalent defect.

SIG-002 shows the old state is gone. The live service now shows only the corrected values. The 27 September retrieval was bound into a hash chain the day it was made, and on 1 October it was sealed, with the corrected records, under the publisher's key. The pack shows that our records have not been edited since. It cannot show, independently of us, what the service returned; the Legislature's own reproduction of the 27 measures is the independent check.

What remains unknown: why the field was wrong for so long, what it was meant to represent, and whether the correction was made because of the report. With the overrides now marked *true*, *Vetoed* = *true* no longer means "did not become law."

PUBLICATION RULE — A PATTERN IS NOT PROOF OF INTENT
<i>A wrong field is not evidence of concealment; the history rows recorded every veto correctly throughout. The timing of the correction does not prove it was made because of the report, and the Legislature's reply does not say so. No one was shown to have relied on the field to their harm. The disagreement is between a data field and the record it summarizes, and this check reports disagreement, not error.</i>

LEAD-001	Neighboring fields in the same service: <i>CurrentLocation</i> scattered 2025's seven vetoes across four different values, and the same action is recorded under different capitalizations within a single session. ANGLE · FIELD-BY-FIELD REPLAY AGAINST ACTION HISTORY	OPEN
LEAD-002	California's 2026 Senate vetoes: 30 of 31 show "In Floor Process" rather than "Vetoed" while the override window is open, unlike Assembly vetoes. Procedural, and temporary in the 2025 data; worth confirming it resolves. ANGLE · RE-PULL CALIFORNIA BILL TABLE AFTER THE VETO CALENDAR IS CLEARED	OPEN
LEAD-003	What the <i>Vetoed</i> field was intended to mean, who maintains it, and why it was set on only one measure since 2007. ANGLE · FOLLOW-UP QUESTION TO THE LEGISLATIVE HELP DESK	OPEN

W-03	California 2026 Senate veto status	<i>Status fails to change to "Vetoed" after the override window closes</i>	06 OCT

PUBLICATION NOTE — Notitia Civica is an independent public-interest publication operated by EVASTARARCANA LLC, Portland, Oregon. Reports are based on public records, open-source reporting, official statements, filings, and structured research workflows. Analytical judgments are separated from sourced facts wherever possible. Method: `proc_track` replays each measure's recorded actions against the field values the service publishes and flags disagreement between them. Corrections are appended to the public record of the issue in which the error appeared. SPEC-1 supports source monitoring and signal organization. Editorial responsibility remains human. Contact: `spec1_ops@proton.me`.
